# Parms explanation:

# **Profitability ratios**

Ratios are constructed as the ratio of the final effect of the enterprise's (output) activity to a particular reference base (input). All ratios in this group can be interpreted in a similar way - they indicate how much earnings CZK is per CZK 1 of the input. The result of the indicators should be a positive value, ideally growing trend.

Return on assets (ROA; %) =  $\frac{\text{Profit (loss) of the accounting period}}{5} * 100$ Return on equity (ROE; %) = Profit (loss) of the accounting period \* 100 Equity Profit (loss) of the accounting period Return on sales (ROS; %) =  $\frac{\text{Profit (loss) of the accounting period}}{\text{Revenues from own products, services and merchandise}} * 100$ 

# Liquidity ratios

Liquidity is a necessity for the long-term existence of an enterprise that must not only be reasonably profitable but must at the same time be able to meet its needs. The amount and management of liquidity is based on company strategy, generally speaking, the goal of each entity is to keep the resulting liquidity at the lowest possible level, but assuming that the existence of the company is not threatened. Important is influence of the external economic environment - the more volatile it is, the higher pressure on a certain degree of caution, and hence the

## Export created: 12.05.2022 at 13:20 by Tomáš Jandera with licence: Artemis Premium - INSCOM

higher liquidity of the business. Role plays also the specificity of the industry, stemming from the length of the production cycle, the sector structure etc.

Current ratio (1.3)	_ Current assets
Current ratio (LS)	= Current assets (Short-term payables + Bank loans - Long-term bank loans)
Outck ratio $(12) =$	(Current assets - Inventory)
	(Short-term payables + Bank loans - Long-term bank loans)
Cash ratio (L1) =-	Financial assets

(Short-term payables + Bank loans - Long-term bank loans)

# Activity ratios

Ratios tell you how the business uses individual assets and what impact this asset management has on returns and liquidity. The low turnaround indicates that the company has large capacities that are not sufficiently used. On the other hand, too high turnover is a warning that the company does not have enough productive assets.

Turnover of assets (TOA; days) =  $\frac{\text{Total assets}}{\text{Revenues from own products, services and merchandise}} * 365$ Turnover of short-term receivables (TOSR; days) =  $\frac{\text{Receivables}}{\text{Revenues from own products, services and merch}} * 365$ Turnover of short-term payables (TOSP; days) =  $\frac{\text{Short-term payables}}{\text{Revenues from own products, services and merchandise}} * 365$ 

Inventory turnover (ITO; days) = Revenues from own products, services and merchandise \* 365

## Leverage ratios

It measures the extent in which company uses debt to financing. Ratios are influenced by four key factors that companies have to consider: taxes, risk, type of assets and degree of financial freedom of an enterprise.

Total debt (TD; %) =  $\frac{\text{Total fixed assets}}{\text{Total assets}}$ Debt equity (DE; %) =  $\frac{\text{Total fixed assets}}{\text{Equity}}$ Financial leverage (FL) =  $\frac{\text{Total assets}}{\text{Equity}}$

# EDIFICATION

### Scoring

It indicates percentage of the insolvency probability of the entity in the following 12 months. The result of the calculation is interpreted by a ten-step scale that divides rated entities into risk groups. Scoring is optimized for wider entity groups and thus when interpreting it individually the importance of complex view in the context of the model methodology and other parameters in the credit report must be taken into account as well as the context of setting according to the User's internal needs and knowledge of the User.

### **Credit limit**

It indicates the maximum amount of the additional credit load of the rated entity in relation to a single business partner within the one year period without having a negative impact on the financial situation of the entity, i.e. also on repayment of liabilities from the business relationship (according to Scoring model).

### **Transaction limit**

It indicates a limit for a single invoice, i.e. the maximum amount that is recommended by Scoring model as being invoiced one-off to the rated entity with standard maturity. Transaction limit is more suitable than a credit limit for everyday business as the credit limit is established for larger investments over a longer time horizon.

The Credit or Transaction Limit works as an independent recommended amount that should be modified in the specific context when taking into account other information available as well as User's experience within the business relationship with the entity.

### **Payment information**

The index works with information on how well on average the rated entity pays the liabilities to its suppliers. Payment behaviour rating is represented by payment index that indicates how many days before or after maturity the rated entity pays its liabilities. The payment index calculation is based on the collection of payment information delivered by our contractual partners. From the total quantity of invoices available for the rated entity a short-term (3 months) and a long-term (12 months) payment index value is calculated within a nine-point scale. The bigger quantity of invoices and payment information providers, the stronger proving ability of the payment index is.

Note that the value of the Scoring, Credit and Transaction index and payment index is only indicative and its function is merely auxiliary; in any case, payment index should not be used either for automatic decisioning purposes without previous subjective assessment.

For a description of the basic input parameters, refer to the external documentation of the service on <a href="https://www.dnb.com/cs-cz/privacy/dokumenty">https://www.dnb.com/cs-cz/privacy/dokumenty</a> or <a href="https://www.dnb.com/sk-sk/privacy/dokumenty">https://www.dnb.com/cs-cz/privacy/dokumenty</a> or <a href="https://www.dnb.com/sk-sk/privacy/dokumenty">https://www.dnb.com/cs-cz/privacy/dokumenty</a> or <a href="https://www.dnb.com/sk-sk/privacy/dokumenty">https://www.dnb.com/cs-cz/privacy/dokumenty</a> or <a href="https://www.dnb.com/sk-sk/privacy/dokumenty">https://www.dnb.com/cs-cz/privacy/dokumenty</a> or <a href="https://www.dnb.com/sk-sk/privacy/dokumenty">https://www.dnb.com/sk-sk/privacy/dokumenty</a>.

#### Debts (overdue liabilities)

Information about debts (overdue liabilities) is processed from publicly available sources and proven external data providers. In any case, information about debts (overdue liabilities) should not be used either for automatic decisioning purposes without previous subjective assessment.

If you are in the position of a rated entity and you think that the given rating doesn't mirror your real situation, please contact <u>podpora.cz@dnb.com</u> or <u>podpora.sk@dnb.com</u> with request for individual review of your input parameters. As part of this process, you may be asked to complete the input information needed to calculate the parameter. If you are in the position of an entity whose debts (overdue liabilities) are registered and you think that the given data doesn't mirror your real situation, please contact <u>podpora.cz@dnb.com</u> or <u>podpora.sk@dnb.com</u> with request for individual review of timeliness and accuracy. As part of this process, you may be asked to complete information needed for data verification.

Also if you, as an entrepreneur – natural person, do not want to be rated within Scoring, Credit and Transaction limit or Payment information then contact podpora.cz@dnb.com or podpora.sk@dnb.com. In that case your rating will read "does not want to be rated" instead of given value.
